ALEXANDRIA MCQUEEN

Building digital homes through code and design

github.com/mintbanshee | mintbanshee.dev/ | linkedin.com/in/mintbanshee

PROFILE

Front-End Developer with full-stack experience and a 12-year background as a small business owner and creative professional. I blend a strong logical mindset with a focus on clean, user-centered interfaces and breathing room in design. I build thoughtful digital experiences with attention to usability, accessibility, and resilient application logic.

TECHNICAL SKILLS

Languages & Frameworks: Java, JavaScript, PHP, Angular, React
Web & Database: MySQL, MVC Architecture, API Integration
Tools & Design: Figma, Adobe Illustrator, Adobe XD, Photoshop
Soft Skills: Adaptability, Clear Communication, Creative Problem-Solving, Attention to Detail, Collaboration, Patience

EDUCATION

triOS College, remote
Diploma in Web & App Developer Using AI
May 2025 – Aug. 2026

- Current GPA 4.0
- Relevant Courses: Java, Swift, HTML/CSS, JavaScript, PHP & MySQL, UI/UX, Version Control & Collaboration, Angular, React, Photoshop, Illustrator

PROJECTS

The Foxglove Tome – In Active Development: Capstone Project | View progress page
A mental wellness journal and mood tracker prioritizing a "calm-first" user experience.
(HTML, Bootstrap, CSS, PHP, MySQL, React, Adobe Illustrator)

- Designing and building a full-stack journaling platform focused on mental wellness and user-centered interaction
- Developing a **dynamic data visualization system** where user emotion is represented by digital flora, requiring complex front-end state management and a "calm-first" aesthetic.
- Applying high-level quality control to ensure **accessibility compliance** and "breathing room" in the layout, prioritizing the user's emotional state during navigation.
- Implementing secure back-end logic using PHP and MySQL, utilizing **prepared statements** and password hashing to protect sensitive user data and ensure the privacy of personal journal entries.
- Connected a React front-end to a PHP/MySQL backend with secure user authentication, protected data handling, and custom application logic
- Built for users who benefit from calm, clear, low-friction design, with ongoing feedback helping shape readability, ease of use, and accessibility decisions

BookBrowser – Angular Front-End Application | View the Repo
(Angular, TypeScript, Bootstrap, HttpClient, db.json)

- Developed a front-end application using Angular with a component-based architecture to manage and display book data
- Implemented full **CRUD** functionality including adding, editing, and deleting entries through a simulated REST-style data source
- Built **user-focused** features such as live search, favorites toggling, and filtered views to support intuitive browsing
- Designed with a focus on clarity, readability, and low-friction user experience across multiple views and interactions
- Utilized Angular **HttpClient** with a local JSON data source to model real-world API interaction and dynamic UI updates

SportsPro – PHP/MySQL Technical Support System | View the Repo

- Engineered a full-stack application using **MVC architecture** to manage product incidents and technician assignments
- Developed advanced relational **data modeling** and structured database interactions to handle complex CRUD operations
- Implemented secure back-end logic with **prepared statements**, ensuring strong data integrity and a reliable administrative workflow

Dewdrop Defenders - Java | View the Repo
A turn-based combat game focusing on architectural modularity and Object-Oriented logic.

- Engineered a modular combat engine using Abstract Classes to manage parallel hierarchies for both player-controlled "Defenders" and randomized "Hollowborn" enemies
- Designed unique, class-based combat behaviors (e.g., *Whisperend*) through **Method Overriding**, utilizing **Probability Algorithms** to determine real-time damage outcomes
- Leveraged **Private** and **Protected** access modifiers alongside robust **Getter/Setter** logic to maintain secure, predictable state management throughout the application lifecycle
- Engineered a health-triggered "Special Ability" mechanic that dynamically updates the user interface and combat options only when player health drops below 35%, incorporating a "once-per-encounter" logic constraint to ensure balanced gameplay.

WORK EXPERIENCE

Internship – Pani Puri Paradise
12 weeks starting May 18th | Remote

- Contributing to web development and digital marketing efforts across multiple websites

Blue Spruce Musings – Owner/Artisan
Feb. 2013 – 2025 | Online

Precision & Quality Control:

- Executed high-level quality control by ensuring the flush alignment of thousands of individual components, manually checking every closure for physical consistency and customer comfort.
- A practice that translates to my current need/desire for clean, readable code and breathable user experiences.

Pattern Logic & Architecture:

- Executed complex weave patterns requiring strict adherence to structural logic, such as jump ring aspect ratio, ensuring every element was perfectly seated to maintain the integrity of the design.

Material Integrity:

- Managed the delicate handling of materials to prevent surface damage, mirroring the style I now use to protect user flow and aesthetic integrity in web applications.

Community-Driven Sales & System Design:

- Successfully managed an exclusive Facebook community, architecting a high-demand "first-to-comment" release system that prioritized customer preference over traditional e-commerce platforms.

Database Management & Personalization:

- Maintained a record of customer measurements to streamline the user experience, allowing for rapid sizing, customization and fulfillment without constant information requirement from customers.

Creative Brand Strategy & Visual Storytelling:

- Photographed, modeled, and marketed themed "One-of-a-Kind" collections (e.g., Winter Wonderland, Enchanted Forest, etc.) to build excitement , maintaining a high-touch brand identity that drove engagement and rapid sales.

Full-Cycle Fulfillment & Logistics:

- Managed the end-to-end "Purchase-to-Payload" lifecycle, including personalized PayPal invoicing, custom sizing, and secure logistics for unique, non-reproducible inventory.
